The Atmel® AVR ISP is an In-System Programmer for Atmel's AVR® Flash microcontrollers. The AVR ISP gives the designer a compact and reliable programming tool to program all In-System Programmable AVR microcontrollers through a 6- or 10-pin ISP connector. The AVR ISP uses AVR Studio®, Atmel's Integrated Development Environment (IDE) for code writing and debugging. The programming software can be controlled from both a Windows® environment and a DOS command-line interface.

- AVR Studio Operated
- Serial In-System Programming
- RS-232 Interface to PC
- Upgrades are done from AVR Studio
- Target Voltage 2.7 – 6.0V
- Powered from Target. No Need for Additional Power Supply
The AVR ISP is a compact and easy-to-use In-System Programming tool for developing applications with Atmel's AVR microcontrollers. Due to the small size, it is also an excellent tool for field upgrades of existing applications using AVR microcontrollers. The AVR ISP is powered by the target application and an additional power supply is thus not required for AVR ISP Programmer.

The AVR ISP Programming interface is integrated in AVR Studio. The Flash, EEPROM and all Fuse and Lock Bit options ISP-programmable can be programmed individually or with the sequential automatic programming option. The AVR clock frequency and supply voltage can also be controlled from AVR Studio.

A DOS Programming software is included for efficient batch programming in a production environment.

### Supported Devices

Note: Low power versions are also supported.

### Ordering Information

The AVR ISP is available from Atmel franchised distributors.

The ordering code is ATAVRISP.

The latest version of AVR Studio is available free of charge from Atmel web site: www.atmel.com
