SPEAKER-1115-3.5-SC-COBRA-WP

The 11×15×3.5 mm COBRA-WP is an advanced miniature speaker of rectangular shape, specifically designed for waterproof applications in portable consumer devices, such as music phones, smartphones or tablet computers where high quality sound is required. It features Knowles’ advanced membrane technologies resulting in a state-of-the-art silicone membrane. This unique Knowles silicone membrane enables ultra-high excursion rates and superior robustness.

All materials used on the top surface of the speaker are tested to be water resistant. 100% leak measurement guarantees IPx8 waterproof compliance.

In addition to waterproof compliance this component provides the same performance as the standard COBRA speaker device (available under part number 2403 260 00091).

Features:
- IPx8 waterproof tested in 1.5m for 30min.
- Waterproof compliance 100% tested for each single speaker device
- 1000mW maximum power handling capacity even at high ambient temperature
- Unique Knowles silicone membrane providing ultra-high excursion for minimum THD, Q-factor and tumbling
- Pre-loaded springs for mechanical robustness and easy handling
- Multi-magnet system for improved sensitivity
- Fully-automated manufacturing
- 100% in-line measurement of specified acoustical and electrical parameters

1. **Theory of operation**

SPEAKER-1115-3.5-SC-COBRA-WP is an electrodynamic transducer, designed to translate electrical analog signals into acoustic waves. The input signal is fed into a coil which is exposed to a permanent magnetic field and where a membrane is attached to. Through the principle of the resulting electromagnetic force, the membrane is moved according to the contents of the input signal and thus emitting sound by the air shifted.
2. Mechanical Layout and Dimensions

2.1. Main Dimensions
2.2. PWB layout & electric polarity

</tbody>
</table>

2.4.1. Test method

- Test speed $v = 10\text{mm/min}$
- Load contact spring 2x to basket level (0.0mm)
- The min. contact spring force shall be measured at test position (0.5mm), second backwards stroke of diagram
- Load contact spring to full compressed (-0.2mm) and measure max. contact spring force
2.5. HNO3 test area
2.6. Part marking/labeling

The samples have a serial number on bottom (pot) side.
2.7. Force on component

3.2. Electro-acoustic parameters

Loudspeaker mounted in adapter acc. to 3.6 in setup acc. to 3.5.

1. Rated impedance \( Z: \) 6\( \Omega \)
2. Voice coil DC resistance \( R: \) 5.4\( \Omega \pm 10\% \)
3. Resonance frequency (measured @1cm\(^3\), 700mW) \( f_0: \) 850Hz\( \pm 7.5\% \)
3.1 Typical resonance frequency (measured @open back, 0,5V) \( f_0: \) 500Hz
4. Maximum usable excursion (peak-peak) \( x_{\text{max}}: \) 0.74mm\(_{\text{p-p}}\)
5. Measured characteristic sensitivity (measured at 1W in 1cm, calculated to 1m average from 2kHz to 6kHz, thermal compression included)
   5.1 Measured characteristic sensitivity (at 1V in 10cm) 74\( \pm 2\)dB
5.2 Measured characteristic sensitivity (at 1V in 10cm) average from 2kHz to 6kHz 87.2\( \pm 2\)dB
6. THD according chapter 3.1.
7. Rub & buzz no audible R&B at max sine power

All acoustic measurements at 23\( \pm 2\)°C

3.3. Power handling

Speaker mounted in 1cm\(^3\) test device (open front)

1. Max sine power \( f \geq 1kHz \) 1000mW \\
   \( f < 1kHz \) 700mW 
   (at 1cm\(^3\) if no extra damping is provided)
2. Max short term power \( (70°, 1sec. \text{ ON} / 60sec. \text{ OFF}) \) 1200mW (RMS) 
   (pink noise, 2\(^{nd}\) order high pass filtered, -3dB at 1.2kHz, crest factor 2)
3. Max continuous power \( (70°, 500h) \) 1000mW (RMS) 
   (white noise, 2\(^{nd}\) order high pass filtered, -3dB at 100Hz, 2\(^{nd}\) order low pass filtered, -3dB at 8kHz, crest factor 2)
3.4. Measured parameters

3.4.1. Sensitivity

SPL is expressed in dB rel 20µPa, computed according to IEC 268-5.
Measurement set up and parameters according chapter 3.5.
This test is performed for 100% of products in the production line.

3.4.2. Frequency response

Frequency response is measured according test set up in chapter 3.5 data sheet and checked against the tolerance window defined in chapter 3.1. This Test is performed for 100% of products in the production line.

3.4.3. Total harmonic distortion (THD)

Is measured according IEC 268-5 (2nd to 5th harmonics) and test set up in chapter 3.5. This test is performed for 100% of products in the production line.

3.4.4. Rub & buzz

Rub & buzz will be measured in the Inline-measuring device with a sinusoidal sweep. Rub and buzz is defined as the maximum peak sound pressure in transmission range of the 5kHz high pass filter. This test is performed for 100% of products in the production line.

3.5. Measurement setup

Measurement signal: Logarithmic sine sweep, 1.5s, 22kHz-180Hz
3.6. Measurement adapter
4. **Environmental Conditions**

4.1. **Storage**

The transducer fulfills the specified data after treatment according to the conditions of

ETS 300 019-2-1 Specification of environmental test: Storage
Test spec. T 1.2: Weather protected, not temperature controlled storage locations.

4.2. **Transportation**

The transducer fulfills the specified data after treatment according to the conditions of

ETS 300 019-2-2 Specification of environmental test: Transportation
Test Spec. T 2.3: Public Transportation

4.3. **Functionality**

The transducer fulfills the specified data after treatment according to the conditions of

ETS 300 019-2-5 Specification of environmental test: Ground vehicle installations
Test spec. T 5.1: Protected installation

ETS 300 019-2-7 Specification of environmental test: Portable and non-stationary use
Test spec. T 7.3E: Partly weather protected and non-weather protected locations.
5. Environmental tests

5.1. Qualification tests

According to our milestone plan (Product Creation Process), a complete qualification test will be done at design validation of products manufactured under serial conditions. 1x per year and product family a requalification takes place. The qualification process covers all tests described under 5.5 and a complete inspection.

5.2. Reliability tests

1x per month and product family samples are taken and submitted to tests described under 5.5.2.

5.3. Sample size, sequence

Unless otherwise stated 20 arbitrary new samples will be used to perform each test for both, qualification and requalification test as described under 5.1 and 5.2.

5.4. Period of Shelf-Life

The period of shelf-life is 2 years.

5.5. Testing procedures

5.5.1. Storage tests

5.5.1.1. Cold storage test
