### Top Loading Coin Cell Holders

**Vertical Holders**
- Vertical battery holders maximize available board real estate, freeing up space.
- Particularly suitable for single board computers with tight space constraints.

**Thru-Hole Mounting**
- Easy access from above to change the battery, no tools required.
- High impact plastic and corrosion-resistant metals.
- Snap Dragon series has latching cover.

**Surface Mounting**
- Multiple versions to accommodate different designs.
- Snap Dragon’s with covers.
- Press to eject the battery version, solder lug version for off-board mounting.

### Side Loading Coin Cell Holders

**Coin Cell Holders**
- Traditional coin cell holders that started it all.
- From 10 mm to 30 mm Diameter lithium batteries.
- No tools to change the battery.
- Easy in-n-out versions.
- Spring clip versions, pressure tab versions, dual battery cell versions for 6V.

**Gliders**
- Gliders are a hybrid between a retainer and a holder, offering the price competitiveness of a coin cell retainer, while at the same time giving a better and more reliable connection than the standard battery holder.
- Once the battery has been installed into the tray, it simply glides into the retainer and clicks into place to provide a secure connection. Load, lock and replace batteries easily.

**Retainers**
- Designed to meet the rigorous demands of portable equipment and featuring ultra light weight with exceptional strength.
- Sizes range from 4.8 mm to 24 mm diameters and in heights from 1.2 mm to 5.8 mm.
- Available on tape and reel.
- Low cost, Dual beam contacts, low profile, No tool necessary to change battery.
