1. INTRODUCTION

This specification describes manual half insertion type magnetic card reader with built in RS232 interface and decoder on single board.

2. PRODUCT NAME

2.1 Product Name : Manual Half Insertion type magnetic card reader w/ built-in RS-232

2.2 Model No. : ZU-M2242S3R2

3. FUNCTION

3.1 Card operation : Insertion & Ejection
3.2 Read/Write : Read only
3.3 Read direction : Forward (Insertion)

4. EQUIPMENT SPECIFICATION

4.1 Card operating speed : 10 cm/s to 120 cm/s
4.2 Out dimension : (D) 102 mm x (L) 94 mm x (H) 26 mm
4.3 Weight : Approximately 60 g
4.4 Supplied voltage
   (1) Supplied voltage : DC 5 V ± 10 % , Ripple (Less than 50 mVp-p)
   (2) Current consumption : Approx. 30 mA
4.5 Connector : Molex 53261-0590
4.6 Environment requirements : At indoor
4.7 Material of Bezel : Conductive material
5. CARD STANDARD

5.1 Card standard

<table>

(Ref.) Receptacle: Molex 51021-0500
Terminal : Molex 50079-8000
7. ENVIRONMENTAL CHARACTERISTICS

7.1 Operating temperature Range: -10 °C to +50 °C

7.2 Operating humidity Range: 10 % to 90% RH (No condensation allowed)

7.3 Storage temperature Range: -20 °C to +60 °C

7.4 Storage humidity Range: 10 % to 95 % RH (No condensation allowed)

7.5 Vibration: Vibration sweep 10 Hz to 50 Hz/minute

7.6 Shock durability: 294 m/s² (30 G)

7.7 Others: Make sure any source of noise that may deteriorate the characteristics of the card reader is not present around the card reader.

8. HOST RS 232 COMMANDS

8.1 General Description
All command strings begin with a “:” as shown and end with [CR] (not shown)
[CR] = ASCII carriage return character, 0DH.
[LF] = ASCII line feed character, 0AH.
<sh> = high digit of 8 bit hexadecimal checksum
<sl> = low digit of 8 bit hexadecimal checksum

Mode: Polling mode
Auto Send Mode (default)
Configuration – Saved in EEPROM.

8.2 UCIMAG Configuration Commands
:Bx - Change Baud rate x=3-> 9600, x=4->19200
:Ab - Auto clear bit, if b=0 disable, if b=1 enable
if Autoclear = 1, UCIMAG will automatically clear track buffers after sending track data. User will NOT be able to poll data again.
If Autoclear = 0, data will remain in buffer until track clear command is sent.
Send the CA command and clear previous data in the buffer surely before reading track data.
:Sb - Auto send bit, if b=0 disable, if b=1 enable
if Autosend = 1, UCIMAG will automatically send track data as soon as card has been inserted, user does not have to poll data.
:Nb - Auto notify bit, if b=0 disable, if b=1 enable
if AutoNotify = 1 and AutoSend = 0, UCIMAG will send the message “Track Read” as soon as
the card has been inserted. The user can then poll the data with :Tn command.

8.3 UCIMAG Status Commands
:SR - Send reader status, its configuration
Returns: SR:ABCI.scnde.xyz.t.<sh><sl><CR><LF>
Where:
A=CardLoad1 signal = 0 or 1
B=CardLoad2 signal = 0 or 1
C=CardLoad3 signal = 0 or 1
I=CardInserted signal = 0 or 1
s=AutoSend configuration bit = 0 or 1
c=AutoClear configuration bit = 0 or 1
n=AutoNotify configuration bit = 0 or 1
d=direction configuration bit = 0 or 1 (1 = reverse)
e=UseStartEnd configuration bit = 0 or 1
x=Track 1 enable bit = 0 or 1 (1=enabled)
y=Track 2 enable bit = 0 or 1 (1=enabled)
z=Track 3 enable bit = 0 or 1 (1=enabled)
t=Reader Type character

:ST - Send track status
Returns: ST:dsercc.dsercc.dsercc.<sh><sl><CR><LF>
Where:
d= data was detected on track
s= start character was detected
e = end character was detected
r = LRC check was passed
cc = two characters representing the hex value of byte count of track
first set of “dsercc” is for track 1, second set is for track 2, and third set is for track 3

:V - Send Firmware Version
Returns: “Panasonic MIECOA UCI-MAG vx.xx Copyright xxxx”<CR><LF>

8.4 UCIMAG Track Data Commands
:CA - Clear All tracks

:TA - Transmit All tracks (1,2,3)
same as sending :T1, :T2, :T3 in sequence
note: track data will only be send if the track enable bit for that particular track is set

:Tt - Transmit track ‘t’ data buffer in ASCII
where t = 1,2, or 3 for the track number
Example Returns: T1:%1234567890?.<sh><sl><CR><LF>
If there is an LRC error in the track data a:
T1:error.<sh><sl><CR><LF>
:Ct - Clear track t

8.5 UCIMAG Reset Command
:RX - Reset System

8.6 Default settings
Firmware Version = PANASONIC MIECOA UCI-MAG v3.04 Copyright 1999
Baud Rate = 9600BPS , no parity, 8 data bits, 1 stop bit
Reader Type = 1 (Half Insertion)
Read Direction = 0 (Forward)
Track 1 = Enabled
Track 2 = Enabled
Track 3 = Disabled
AutoNotify = TRUE
AutoSend = TRUE
    UCIMAG will automatically send track data as soon as card has been swiped,
    user does not have to poll data.
AutoClear = FALSE
    UCIMAG will automatically clear track buffers after sending track data, user will
    NOT be able to poll data again.
Include Start & End = TRUE
9. ERROR HANDLING

9.1 Magnetic Card Read Errors

If a card read is bad no data (Tx: error.<sh><sl><CR><LF>) will be returned when track data is requested with the T1, T2, T3, or TA commands.
If AutoClear = 0 when the :SR command will return the status of the most recent card swipe.
The status return string contains data on Missing STX, ETX, and LRC errors for each track.
Please see the details of the :SR command in the preceding section

9.2 Communication Errors

The UCIMAG will acknowledge most RS232 commands with <CR>.
Please see preceding section for details. If the UCIMAG fails to receive the command correctly it will not respond. The Host PC control software should assume that if no response is received in 1 second a communication error has occurred and the command should be resent.

<Calculating Procedure of checksums>

Example) In case that a return data is “SE:400000030000”.
1st step) S(53h)+E(45h)+:(3Ah)+4(34h)+0(30h)+0(30h)+0(30h)+0(30h)+0(30h)+0(30h)+0(30h)+3(33h)+0(30h)+0(30h)+0(30h)+0(30h) = 319h
2nd step) Neglect 3 (upper byte of 319h).
3rd step) Calculate the two’s complement value of 19h (lower byte of 319h).
100h-19h = E7h (E7 is the two’s complement value of 19h.)
Consequently sh is 45h (“E”) and sl is 37h (“7”).

S E :  4      E 7 CR LF
Calculation area of checksum

9.3 Power Failure

If power fails and is then restored, the unit is reset and reinitialized. On reset the UCIMAG will send the current firmware revision. In this way a host PC can tell when power has been lost on the UCIMAG.
10. UNIT LIFE

10.1 Life
    Magnetic head : 300,000 times pass (2 passes / operation)
    (conditions) In a clean office room. In damp or dirty atmosphere, the life may
    be 1/3 to 1/5 of the above figure.

11. MAINTENANCE
    Because of difficulty in changing components on the P.C Board, replacement of whole
    unit is recommended for service and maintenance.
12. CAUTIONS ON USE

Please be noted that we do not guarantee proper performance of the card reader if it is used other than the indicated specification range.

12.1 During installation
(1) Do not drop or bump anything against the card reader. Otherwise, failure may be the result.

(2) Do not touch the P.C.B. with bare hands.

(3) Be sure to install on a flat surface so as to prevent any force to be applied to the card reader during installation.

(4) Avoid installing the Card Reader in the following environment.
   * Watery, humid or dusty place.
   * Near machines which generate magnetic field or induced noise.
     (Printer, LED display, CRT etc.)
   * Place which gets direct sunlight.

In the case that the card readers are used in the environment full of dust etc., the life time of the magnetic head and mechanism for transferring cards will decrease.

12.2 During use
(1) Be sure to use a card which conforms to ISO standard.

(2) Card operation speed should be within the specification range. Forced stop or change of speed during the card operation may cause a read error. Appropriate speed to maintain stable operation is 30 cm/s to 60 cm/s.

(3) Store the card with caution to prevent dirt, scratch and distortion. No foreign matter should be stuck on the magnetic stripe surface. Use of such card may result in a read error.

(4) Insert a cleaning card and clean the head periodically to prevent wearing of the magnetic head. Head cleaning using the cleaning card should be performed about once a week if the room is not dusty.

(5) Environment conditions such as external noise or electrostatics etc. may affect operation of the card reader and interface. Check the level of noise resistance and electrostatic resistance of your factory before using the card reader.
13. APPEARANCE

General tolerance: ± 0.5
Unit: mm
