## SIKYWORIKS

## FEATURES

- Single Input, 5-way Output
- Wideband Operation: to Above 1 GHz
- Maintains RF signal path to high priority port ("Phone") in power loss mode
- Used in conjunction with external FET for shutdown control
- 4.8 dB Typical Noise Figure at 4 dB Gain
- Single +3.3 V Supply
- High Linearity, Low Distortion
- Single-ended 75 Ohm Inputs/Outputs
- RoHS Compliant/Lead Free
- $4 \times 4 \times 0.9 \mathrm{~mm}$ 24-Lead QFN Package

## APPLICATIONS

- Home gateways and CATV digital set-top boxes with multiple tuners, requiring phone bypass when power is lost

## PRODUCT DESCRIPTION

The APS3625 active splitter accepts an RF input in the 50 MHz to 1.0 GHz frequency range and provides five RF outputs with minimal degradation in signal quality. The single-package surface mount device amplifies the input signals using highly linear, low noise amplification stages, and couples the amplified signal to five separate output paths to drive video tuner(s), a DOCSIS tuner(s), or other in-band inputs. The device provides one by-pass output to maintain a connection when the power is lost, which is intended

Figure 1: Functional Block Diagram "ON" Mode

5-Way Active Splitter with One-Port Bypass 50 MHz to 1000 MHz PRELIMINARY DATA SHEET

for critical signals such as a digital voice phone. The overall linearity of each tuner path is maintained across the entire operating frequency range, ensuring low distortion effects on each output signal.

Requiring a single +3.3 Volt supply, the active splitter design is implemented using the GaAs MESFET process. The small surface mount QFN packaging makes this device ideal for use in home gateways and multiple-tuner set-top boxes, supporting multiple video outputs, and/or DOCSIS 3.0 and IP phones.

Table 1: Pin Description

| PIN | NAME | DESCRIPTION | PIN | NAME | DESCRIPTION |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | RF_Match_I | Input from RF Match | 24 | N/C | No Connection |
| 2 | RF_Match_O | Output to RF Match | 23 | SD_CNTL | Control Input for Shut Down |
| 3 | RF_IN_Normal | RF Input - Normal Mode | 22 | VDD | VDD |
| 4 | RF_IN_Bypass | RF Input - Bypass Mode | 21 | N/C | No Connection |
| 5 | N/C | No Connection | 20 | N/C | No Connection |
| 6 | PHN_Bypass | "Phone" Output - Bypass <br> Mode | 19 | VID_OUT_1 | Video Output 1 |
| 7 | PHN_Normal | "Phone Output - Normal |  |  |  |
| Mode | 18 | N/C | No Connection |  |  |
| 8 | N/C | No Connection | 17 | VID_OUT_2 | Video Output 2 |
| 9 | PHN_SW_IN | Input to Phone Switch | 16 | N/C | No Connection |
| 10 | OUT_5 | Output 5 | 15 | VID_OUT_3 | Video Output 3 |
| 11 | N/C | No Connection | 14 | N/C | No Connection |
| 12 | N/C | No Connection | 13 | VID_OUT_4 | Video Output 4 |

## ELECTRICAL CHARACTERISTICS

Table 2: Absolute Minimum and Maximum Ratings

| PARAMETER | MIN | MAX | UNIT | COMMENTS |
| :--- | :---: | :---: | :---: | :--- |
| Supply Voltage (Vcc) | 0 | +8 | V |  |
| RF Input Power | - | +40 | dBmV | per channel <br> 132 channel loading |
| ESD Rating | 500 <br> 1000 | - | V | Human Body Model, Class 1B <br> Charged Device Model, Class 3 |
| MSL Level | $3-260$ | - | - |  |

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability.

Table 3: Operating Ranges

| PARAMETER | MIN | TYP | MAX | UNIT | COMMENTS |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Operating Frequency | 50 | - | 1000 | MHz |  |
| Supply Voltage (VDD) | - | +3.3 | - | V |  |
| RF Input Power (PN) | -15 | - | +15 | dBmV |  |
| Case Temperature <br> (Performance Spec Complaince) | -5 | - | +100 | ${ }^{\circ} \mathrm{C}$ |  |

The device may be operated safely over these conditions; however, parametric performance is guaranteed only over the conditions defined in the electrical specifications.

## APPLICATION INFORMATION

Figure 13: 5-Way Active Power Splitter with external MOSFET
Note:
Pin 22 must have 3.3 V maintained, even during power loss. This is normally accomplished by a battery backup. Upon power loss, the FET load switch (SI 1869DH) cuts off power to the five output amplifiers, and puts the APS3625 in bypass mode.
