- Function and Pinout Compatible With the Fastest Bipolar Logic
- $25-\Omega$ Output Series Resistors Reduce Transmission-Line Reflection Noise
- Reduced $\mathrm{V}_{\mathrm{OH}}$ (Typically $=3.3 \mathrm{~V}$ ) Version of Equivalent FCT Functions
- Edge-Rate Control Circuitry for Significantly Improved Noise Characteristics
- I ${ }_{\text {off }}$ Supports Partial-Power-Down Mode Operation
- Matched Rise and Fall Times
- 3-State Outputs
- ESD Protection Exceeds JESD 22
- 2000-V Human-Body Model (A114-A)
- 200-V Machine Model (A115-A)
- 1000-V Charged-Device Model (C101)
- Fully Compatible With TTL Input and Output Logic Levels
- 12-mA Output Sink Current 15-mA Output Source Current

## description

The CY74FCT2373T is an 8-bit, high-speed CMOS, TTL-compatible buffered latch with 3 -state outputs that is ideal for driving high-capacitance loads, such as memory and address buffers. On-chip $25-\Omega$ termination resistors at the outputs reduce system noise caused by reflections. The CY74FCT2373T can replace the CY74FCT373T to reduce noise in an existing design.
When the latch-enable (LE) input is high, the flip-flops appear transparent to the data. Data that meets the required setup times are latched when LE transitions from high to low. Data appears on the bus when the output-enable $(\overline{\mathrm{OE}})$ input is low. When $\overline{\mathrm{OE}}$ is high, the bus output is in the high-impedance state. In this mode, data can be entered into the latches.

This device is fully specified for partial-power-down applications using $\mathrm{I}_{\text {off }}$ The $\mathrm{I}_{\text {off }}$ circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

$\dagger$ Typical values are at $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$.
$\ddagger$ Not more than one output should be shorted at a time. Duration of short should not exceed one second. The use of high-speed test apparatus and/or sample-and-hold techniques are preferable to minimize internal chip heating and more accurately reflect operational values. Otherwise, prolonged shorting of a high output can raise the chip temperature well above normal and cause invalid readings in other parametric tests. In any sequence of parameter tests, IOS tests should be performed last.
§ Per TTL-driven input ( $\mathrm{V}_{I N}=3.4 \mathrm{~V}$ ); all other inputs at $\mathrm{V}_{\mathrm{CC}}$ or GND
IT This parameter is derived for use in total power-supply calculations.
\# $I_{C} \quad=I_{C C}+\Delta I_{C C} \times D_{H} \times N_{T}+I_{C C D}\left(f_{0} / 2+f_{1} \times N_{1}\right)$
Where:
IC = Total supply current
ICC = Power-supply current with CMOS input levels
$\Delta \mathrm{l} \mathrm{CC}=$ Power-supply current for a TTL high input $\left(\mathrm{V}_{\mathrm{IN}}=3.4 \mathrm{~V}\right)$
DH = Duty cycle for TTL inputs high
$\mathrm{N}_{\mathrm{T}}=$ Number of TTL inputs at $\mathrm{D}_{\mathrm{H}}$
${ }^{\text {I CCD }}=$ Dynamic current caused by an input transition pair (HLH or LHL)
$\mathrm{f}_{0} \quad=$ Clock frequency for registered devices, otherwise zero
$\mathrm{f}_{1}=$ Input signal frequency
$\mathrm{N}_{1}=$ Number of inputs changing at $\mathrm{f}_{1}$
All currents are in milliamperes and all frequencies are in megahertz.
$\|$ Values for these conditions are examples of the ICC formula.

[^0]Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes. Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS \& no Sb/Br): Tl defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed $0.1 \%$ by weight in homogeneous material)
${ }^{(3)}$ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
${ }^{(4)}$ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
${ }^{(5)}$ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a " $\sim$ " will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
${ }^{(6)}$ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC-7351 is recommended for alternate designs.
D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a $50 \%$ volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

[^0]:    ${ }^{(1)}$ The marketing status values are defined as follows:
    ACTIVE: Product device recommended for new designs.
    LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
    NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
    PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
    OBSOLETE: TI has discontinued the production of the device.
    ${ }^{(2)}$ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS \& no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
    TBD: The Pb-Free/Green conversion plan has not been defined
