## TOSHIBA Bi-CMOS Integrated Circuit Silicon Monolithic

## TB62779FNG

## 9-Channel Constant-Current LED Driver of the 3.3-V and 5-V Power Supply Voltage Operation

The TB62779FNG is a constant-current driver designed for LED and LED display lighting.
The TB62779FNG incorporates nine channels of seven-bit PWM dimming controllers and constant-current drivers. Nine constant-current drivers are divided into three blocks, each consisting of three drivers, and the output current of each can be independently adjusted by the relevant external resistor.
The TB62779FNG is controlled using the DATA and CLK input signals. Up to 64 slave IDs (slave addresses) can be independently assigned to the TB62779FNG.

Fabricated using the Bi-CMOS process, the TB62779FNG is capable of high-speed data transfers.

Weight: 0.10 g (typ.)

The TB62779FNG operates with a supply voltage of 3.3 V or 5 V .
The TB62779FNG is RoHS (2002/95/EL) compliant.

## 1. Features

- Power supply voltages: VCC $=3.3 \mathrm{~V} / 5 \mathrm{~V}$
- Output drive capability and output count: $80 \mathrm{~mA}(\max ) \times 9$ channels
- Constant-current output range: 5 to 40 mA
- Voltage applied to constant-current output terminals: $0.4 \mathrm{~V}(\min )$ (IOUT $=5$ to 40 mA )
- Designed for common-anode LEDs
- The input interface is controlled by the DATA and CLK signal lines,
- Thermal shutdown (TSD) (min: $150^{\circ} \mathrm{C}$ )
- Logical Input signal voltage leyel: $3.3-\mathrm{V}$ and $5-\mathrm{V}$ CMOS interfaces (Schmitt trigger input)
- Maximum output voltage: 28 V
- Incorporates PWM control circuitry: Provides seven-bit PWM control.
- Driver identification. Up to 64 drivers can be controlled individually.
- Operating temperatûre range: $\mathrm{T}_{\mathrm{opr}}=-40$ to $85^{\circ} \mathrm{C}$
- Package: SSOP20-P-225-0.65A
- Constant-current aceuracy

| Output Voltage | Current accuracy <br> Between Channels | Current Accuracy <br> Between ICs | Output Current |
| :---: | :---: | :---: | :---: |
| 0.4 V to $4 \mathrm{~V}>$ | $\pm 3 \%$ | $\pm 6 \%$ | 15 mA |

## 2. Pin Assignment (top view)

## 3. Block Diagram

Note: The values of external resistors that are used for adjusting the output current (Rext-R, Rext-G and Rext-B) should be independently specified.
Three resistors must not be collectively connected to a single pin.

## 4. Terminal Description

| Pin No, | Symbol | Function |
| :---: | :---: | :---: |
| 1 | RESET | Reset signal input. (Setting this pin High resets internal data.) (Note 1) |
| 2 | SDA | Serial data input terminal |
| 3 | SCLK | Serial clock input terminal |
| 4 | ID0 | ID configuration pin (Note 1) |
| 5 | ID1 | ID configuration pin (Note 1) |
| 6 | ID2 | ID configuration pin (Note 1) |
| 7 | Rext-R | External resistor pin for output current configuration (/OUTRO, /OUTR1, IOUTR2) |
| 8 | Rext-G | External resistor pin for output current configuration (/OUTG0, /OUTG1, /OUTG2) |
| 9 | Rext-B | External resistor pin for output current configuration (/OUTB0, /OUTB1, /OUTB2) |
| 10 | GND | Ground pin |
| 11 | /OUTR0 | Constant-current output terminal (Open-collector type) |
| 12 | /OUTG0 | Constant-current output terminal (Open-collector type) |
| 13 | IOUTB0 | Constant-current output terminal (Open-collector type) |
| 14 | /OUTR1 | Constant-current output terminal (Open-collector type) |
| 15 | /OUTG1 | Constant-current output terminal (Open-collector type) |
| 16 | /OUTB1 | Constant-current output terminal (Open-collector type) |
| 17 | /OUTR2 | Constant-current output terminal (Open-collector type). (>) |
| 18 | /OUTG2 | Constant-current output terminal (Open-collector type) |
| 19 | /OUTB2 | Constant-current output terminal (Open-collector type) |
| 20 | Vcc | Power supply terminal |

Note 1: After the reset is released, it should be ensured that IDs (slave addresses) are properly configured.

## 5. Equivalent Circuits for Inputs and Outputs

SDA, SCLK Terminals

IOUTRO to IOUTB2 Constant-Current Output Terminals

RESET Terminals

ID0, ID1, ID2 Terminals

## 6. Programming the TB62779FNG

The TB62779FNG can be programmed by the DATA signal on the SDA pin (pin 2) and CLK signal on the SCK pin (pin 3). Though the specification of these signal lines is similar to that of the I2C bus, these lines are only used to program data to the TB62779FNG and bi-directional data transfers are not performed. The TB62779FNG should basically be programmed using one of the following formats: (1) Serial Packet Format in Normal Programming Mode or (2) Serial Packet Format in Special Mode 1.

1) Serial Packet Format in Normal Programming Mode【Typical】

| S | Slave <br> address <br> 8 bits | A | Sub-address <br> (Channel select) <br> 8 bits | A | Data byte <br> (PWM <br> configuration) <br> 8 bits |
| :---: | :---: | :---: | :---: | :---: | :---: |

S: Start command; A: Acknowledge command; P: Period command
a) Data Programming Timing 1

Note: As shown in the above timing diagram, output data changes to 1 when the PWM counter reaches its terminal count after the Period condition is shifted in. Therefore, even after the P condition, the next packet should not be shifted in before the PWM counter reaches its terminal count. Otherwise, the data programmed before the P condition is overwritten with the next data. After the P condition, an interval of about 3.0 ms ( 128 PWM cycles) is required before shifting in the next packet.
2) Serial Packet Format in Special Mode 1

When the sub-address is specified to 1000 XXXX , all the channels are selected in order. Make sure that data for all nine channels are provided.
(If data for more than nine channels are provided, the 10th and subsequent data are treated as invalid. If data for less than nine channels are provided, those data are written to the channels in order and the remaining channels retain the previous data.)
To put the TB62779FNG back into Normal mode, a Start condition should be transmitted first.
In Special Mode 1, the sub address is set with a value of 8 x slave instruction/IC.

| S | Slave <br> Address | A | Sub-Address(channel select) <br> 8bits(1000XXXX) | A | $\begin{array}{c\|} \hline \text { Data } \\ \text { /OUTRO } \\ \hline \end{array}$ | A | $\begin{array}{c\|} \hline \text { Data } \\ \text { /OUTGO } \\ \hline \end{array}$ | A | Data /OUTB0 | A | $\begin{array}{\|c\|} \hline \text { Data } \\ \text { /OUTR1 } \\ \hline \end{array}$ | A | $\begin{array}{\|c\|} \hline \text { Data } \\ \text { /OUTG1 } \\ \hline \end{array}$ | A | $\begin{array}{c\|} \hline \text { Data } \\ \text { /OUTB1 } \\ \hline \end{array}$ | A | Data <br> /OUTR2 | A | Data <br> /OUTG2 | A | $\begin{array}{\|c\|} \hline \text { Data } \\ \text { /OUTB2 } \\ \hline \end{array}$ | A | P |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

3) Data Write Start Condition (S) and Period Condition (P)

Start condition: A High to Low transition on the SDA line while SCLK is High.
Period condition: A Low to High transition on the SDA line while SCLK is High.

4) Setup and Hold Conditions

The SDA signal must be changed when SCLK is Low.

SDA

5) Acknowledge

CLK signals for acknowledgement must be generated after every byte received.
(Though the TB62779FNG is not designed to perform bi-directional data transfers, it must generate this acknowledgement clock signal.)

SDA

SCL

6) Data Settings
a) Slave Addresses

Input voltages and logic states of the ID0, ID1 and ID2 pins are determined as follows (where the LSB $=0$ ):
Vcc $=" 11 ", 2 / 3 \mathrm{Vcc}=" 10 ", 1 / 3 \mathrm{Vcc}=" 01 ", \mathrm{GND}=" 00 "$

| Select Address | ID2 | ID1 | ID0 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 00000000 | GND | GND | GND |  |  |
| 00000010 | GND | GND | $1 / 3 \mathrm{Vcc}$ |  |  |
| 00000100 | GND | GND | $2 / 3 \mathrm{Vcc}$ |  |  |
| $\ldots$ | $\ldots$ | $\ldots$ | $\ldots$ |  |  |
| 01111100 | Vcc | Vcc | $2 / 3 \mathrm{Vcc}$ |  |  |
| 01111110 | Vcc | Vcc | Vcc |  |  |
| 1XXXXX0 | All Select |  |  |  |  |

b) Sub-Addresses

Output channel select / All channel select / Special mode select

| 7 bit | 6 bit | 5bit | 4bit | 3bit | 2bit ${ }^{\text {a }}$ | 1 bit | 0bit | channel select |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 - | 1) | /OUTR0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 1 | $\triangle 1$ | ) /OUTG0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 1 | 1 | /OUTB0 |
| 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | /OUTR1 |
| 0 | 0 | 0 | 0 | 0 | 1 | 0 | 1 | /OUTG1 |
| 0 | 0 | 0 | 0 | 0 | - 1 | $\square$ | 0 | /OUTB1 |
| 0 | 0 | 0 | 0 | 0 | > 1 | 1 | 1 | /OUTR2 |
| 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 | /OUTG2 |
| 0 | 0 | 0 | 0 | 1 | 0 | 0 | 1 | /OUTB2 |

| 1 | 0 | 0 | 0 | $\iint_{x}$ | $\times$ | $\sqrt{x}$ | $\times$ | Special mode1 |

c) Data Bytes (PWM configuration)

| 7 bit | 6 bit | 2bit | 4bit | 3bit | 2bit | 1bit | 0bit | PWM Dimming <br> (for reference only) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | $0 / 127$ (Default) |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | $1 / 127$ |
| 0 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | $2 / 127$ |
|  |  |  |  | 1 |  |  |  |  |
| 0 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 0 |
| 0 | 1 | 1 | 1 | 1 | 1 | $126 / 127$ |  |  |

Note: Any data other than those specified above must not be programmed.

## 7. Power-ON Reset (POR)

The POR circuitry resets all the internal data to the default values upon powering up the TB62779FNG in order to ensure proper device operation.
The POR circuitry is only activated when Vcc rises from 0 V . To reactivate POR, Vcc must be powered down to 0 V . The internal data hold voltage is guaranteed after Vcc has once reached or exceeded 3.0 V.
2.0 V
1.8 V

0 V

## 8. Thermal Shutdown (TSD)

When the die temperature reaches $150^{\circ} \mathrm{C}$, the thermal shutdown circuit is tripped, switching the constant-current outputs to off.

The constant-current outputs are automatically turned on when the temperature cools past the shutdown threshold.
TSD trip temperature: $150^{\circ} \mathrm{C}$ to $170^{\circ} \mathrm{C}$
TSD recovery temperature: $30^{\circ} \mathrm{C}$ below the TSD trip temperature

## 9. Points to Note when Setting Up the TB62779FNG

1. External resistors for specifying the LED driving current (Rext-R, Rext-G, Rext-B)

External resistors should be separately connected to the Rext-R, Rext-G and Rext-B pins. Three resistors must not be collectively connected to a single pin.
2. External resistors for ID configuration

The total resistance value of three external resistors used for specifying a device ID (which are connected between Voc and GND) should be about $30 \mathrm{k} \Omega$ or lower.
(A recommended value will be clearly defined after the TB62779FNG is completed.)
3. ID configuration sequence

ID configuration can be performed after POR is released upon powering on. However, to avoid false operation of the ID configuration, transient input signals of less than two clock cycles of the reference clock for the internal oscillator are not accepted.

Care should be taken during the period between the POR released timing and the timing when power supply has reached the rated Vac voltage.
4. ID configuration

Make sure to set IDs after releasing reset condition.

## 10. State Transition Diagram

## Power-ON

Vcc reaches the POR release threshold voltage.
$\downarrow$
ID specified by the master matches that of the TB62779FNG

## TSD Mode (Thermal Shutdown)

 When the die temperature exceeds the TSD trip threshold temperature, all the outputs are disabled, while internal data is retained.
## 11. Absolute Maximum Ratings ( $\mathbf{T a}=\mathbf{2 5}{ }^{\circ} \mathrm{C}$ )

| Characteristics | Symbol | Rating | Unit |
| :---: | :---: | :---: | :---: |
| Supply voltage | VCC | 6.0 | V |
| Input voltage | VIN | -0.3 to Vcc +0.3 (Note 1) | V |
| Output current | IOUT | 85 | mA/ch |
| Output voltage | Vout | -0.3 to 29 | V |
| Power dissipation | Pd | 1.02 (Notes 2 and 3) | W |
| Thermal resistance | Rth (j-a) | 122 (Note 2) | ${ }^{\circ} \mathrm{C} / \mathrm{W}$ |
| Operating temperature range | Topr | -40 to 85 | ${ }^{\circ} \mathrm{C}$ |
| Storage temperature range | $\mathrm{T}_{\text {stg }}$ | -55 to 150 | ${ }^{\circ} \mathrm{C}$ |
| Maximum junction temperature | Tj | 150 |  |

Note 1: $\quad$ However, do not exceed 6.0 V.
Note 2: $\quad$ When mounted on a PCB $(76.2 \times 114.3 \times 1.6 \mathrm{~mm} ; \mathrm{Cu}=30 \% ; 35-\mu \mathrm{m}$-thick; SEMI-compliant $)$
Note 3: $\quad$ Power dissipation is reduced by $1 /$ Rth ( $j$-a) for each ${ }^{\circ} \mathrm{C}$ above $25^{\circ} \mathrm{C}$ ambient.
12. Operating Ranges ( $\mathrm{Ta}=-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$, unless Otherwise specified)

13. Electrical Characteristics ( $\mathrm{Ta}=25^{\circ} \mathrm{C}, \mathrm{VCC}=4.5$ to 5.5 V , unless otherwise specified)

## Notes on Contents

## 1. Block Diagrams

Some of the functional blocks, circuits, or constants in the block diagram may be omitted or simplified for explanatory purposes.

## 2. Equivalent Circuits

The equivalent circuit diagrams may be simplified or some parts of them may be omitted for explanatory purposes.

## 3. Timing Charts

Timing charts may be simplified for explanatory purposes.

## 4. Application Examples

The application examples provided in this data sheet are provided for reference only. Thorough evaluation and testing should be implemented when designing your application's mass production design.
In providing these application examples, Toshiba does not grant the use of any industrial property rights.

## 5. Test Circuits

Components in the test circuits are used only to obtain and confirm the device characteristics. These components and circuits are not guaranteed to prevent malfunction or failure from occurring in the application equipment.

## IC Usage Considerations

## Notes on handling of ICs

(1) The absolute maximum ratings of a semiconductor device are a set of ratings that must not be exceeded, even for a moment. Do not exceed any of these ratings.
Exceeding the rating(s) may cause breakdown, damage or deterioration of the device, and may result in injury by explosion or combustion.
(2) Use an appropriate power supply fuse to ensure that a large current does not continuously flow in the event of over current and/or IC failure. The IC will fully break down when used under conditions that exceed its absolute maximum ratings, when the wiring is routed improperly, or when an abnormal pulse noise occurs from the wiring or load, causing a large current to continuously flow. Such a breakdown can lead to smoke or ignition. To minimize effects of a large current flow in the event of breakdown, fuse capacity, fusing time, insertion circuit location, and other such suitable settings are required.
(3) If your design includes an inductive load such as a motor coil, incorporate a protection circuit into the design to prevent device malfunction or breakdown caused by the current caused by inrush current at power ON or the negative current caused by the back electromotive force at power OFF. IC breakdown may cause injury, smoke or ignition.
For ICs with built-in protection functions, use a stable power supply. An unstable power supply may cause the protection function to not operate, causing IC breakdown. IC breakdown may cause injury, smoke or ignition.
(4) Do not insert devices incorrectly or in the wrong orientation.

Make sure that the positive and negative terminals of power supplies are connected properly.
Otherwise, the current or power consumption may exceed the absolute maximum rating, and exceeding the rating(s) may cause breakdown, damage or deterioration of the device, which may result in injury by explosion or combustion.
In addition, do not use any device that has had current applied to it while inserted incorrectly or in the wrong orientation even once.
(5) Carefully select power amp, regulator, or other external components (such as inputs and negative feedback capacitors) and load components (such as speakers),.
If there is a large amount of leakage current such as input or negative feedback capacitors, the IC output DC voltage will increase. If this output voltage is connected to a speaker with low input withstand voltage, overcurrent or ICfailure can cause smoke or ignition. (The over current can cause smoke or ignition from the IC itself.) In particular, please pay attention when using a Bridge Tied Load (BTL) connection type IC that inputs output DC voltage to a speaker directly.

## Points to remember on handling of ICs

(1) Heat Dissipation Design

In using an IC with large current flow such as a power amp, regulator or driver, please design the device so that heat is appropriately radiated, not to exceed the specified junction temperature ( Tj ) at any time or under any condition. These ICs generate heat even during normal use. An inadequate IC heat dissipation design can lead to decrease in IC life, deterioration of IC characteristics or IC breakdown. In addition, please design the device taking into consideration the effect of IC heat dissipation on peripheral components.
(2) Back-EMF

When a motor rotates in the reverse direction, stops, or slows down abruptly, a current flows back to the motor's power supply due to the effect of back-EMF. If the current sink capability of the power supply is small, the device's motor power supply and output pins might be exposed to conditions beyond maximum ratings. To avoid this problem, take the effect of back-EMF into consideration in your system design.

## RESTRICTIONS ON PRODUCT USE

- Toshiba Corporation, and its subsidiaries and affiliates (collectively "TOSHIBA"), reserve the right to make changes to the information in this document, and related hardware, software and systems (collectively "Product") without notice.
- This document and any information herein may not be reproduced without prior written permission from TOSHIBA. Even with TOSHIBA's written permission, reproduction is permissible only if reproduction is without alteration/omission.
- Though TOSHIBA works continually to improve Product's quality and reliability, Product can malfunction or fail. Customers are responsible for complying with safety standards and for providing adequate designs and safeguards for their hardware, software and systems which minimize risk and avoid situations in which a malfunction or failure of Product could cause loss of human life, bodily injury or damage to property, including data loss or corruption. Before customers use the Product, create designs including the Product, or incorporate the Product into their own applications, customers must also refer to and comply with (a) the latest versions of all relevant TOSHIBA information, including without limitation, this document, the specifications, the data sheets and application notes for Product and the precautions and conditions set forth in the "TOSHIBA Semiconductor Reliability Handbook" and (b) the instructions for the application with which the Product will be used with or for. Customers are solely responsible for all aspects of their own product design or applications, including but not limited to (a) determining the appropriateness of the use of this Product in such design or applications; (b) evaluating and determining the applicability of any information contained in this document, or in charts, diagrams, programs, algorithms, sample application circuits, or any other referenced documents; and (c) validating all operating parameters for such designs and applications. TOSHIBA ASSUMES NO LIABILITY FOR CUSTOMERS' PRODUCT DESIGN OR APPLICATIONS.
- PRODUCT IS NEITHER INTENDED NOR WARRANTED FOR USE IN EQUIPMENTS OR SYSTEMS THAT REQUIRE EXTRAORDINARILY HIGH LEVELS OF QUALITY ANDIOR RELIABILITY, ANDIOR A MALFUNCTION OR FAILURE OF WHICH MAY CAUSE LOSS OF HUMAN LIFE, BODILY INJURY, SERIOUS PROPERTY DAMAGE ANDIOR SERIOUS PUBLIC IMPACT ("UNINTENDED USE"). Except for specific applications as expressly stated in this document, Unintended Use includes, without limitation, equipment used in nuclear facilities, equipment used in the aerospace industry, medical equipment, equipment used for automobiles, trains, ships and other transportation, traffic signaling equipment, equipment used to control combustions or explosions, safety devices, elevators and escalators, devices related to electric power, and equipment used in finance-related fields. IF YOU USE PRODUCT FOR UNINTENDED USE, TOSHIBA ASSUMES NO LIABILITY FOR PRODUCT. For details, please contact your TOSHIBA sales representative.
- Do not disassemble, analyze, reverse-engineer, alter, modify, translate or copy Product, whether in whole or in part.
- Product shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable laws or regulations.
- The information contained herein is presented only as guidance for Product use. No responsibility is assumed by TOSHIBA for any infringement of patents or any other intellectual property rights of third parties that may result from the use of Product. No license to any intellectual property right is granted by this document, whether express or implied, by estoppel or otherwise
- ABSENT A WRITTEN SIGNED AGREEMENT, EXCEPT AS PROVIDED IN THE RELEVANT TERMS AND CONDITIONS OF SALE FOR PRODUCT, AND TO THE MAXIMUM EXTENT ALLOWABLE BY LAW, TOSHIBA (1) ASSUMES NO LIABILITY WHATSOEVER, INCLUDING WITHOUT LIMITATION, INDIRECT, CONSEQUENTIAL, SPECIAL, OR INCIDENTAL DAMAGES OR LOSS, INCLUDING WITHOUT LIMITATION, LOSS OF PROFITS, LOSS OF OPPORTUNITIES, BUSINESS INTERRUPTION AND LOSS OF DATA, AND (2) DISCLAIMS ANY AND ALL EXPRESS OR IMPLIED WARRANTIES AND CONDITIONS RELATED TO SALE, USE OF PRODUCT, OR INFORMATION, INCLUDING WARRANTIES OR CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, ACCURACY OF INFORMATION, OR NONINFRINGEMENT.
- Do not use or otherwise make available Product or related software or technology for any military purposes, including without limitation, for the design, development, use, stockpiling or manufacturing of nuclear, chemical, or biological weapons or missile technology products (mass destruction weapons). Product and related software and technology may be controlled under the applicable export laws and regulations including, without limitation, the Japanese Foreign Exchange and Foreign Trade Law and the U.S. Export Administration Regulations. Export and re-export of Product or related software or technology are strictly prohibited except in compliance with all applicable export laws and regulations.
- Please contact your TOSHIBA sales representative for details as to environmental matters such as the RoHS compatibility of Product. Please use Product in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. TOSHIBA ASSUMES NO LIABILITY FOR DAMAGES OR LOSSES OCCURRING AS A RESULT OF NONCOMPLIANCE WITH APPLICABLE LAWS AND REGULATIONS.
